

GSQIS Toolbox for ArcGIS Pro

Installation & Testing Guide

Version 1.0 | ArcGIS Pro 3.0+

Support: geo-customersupport@idoxgroup.com

SDK: <https://sdk.idoxgeospatial.co.uk/>

© Idox Geospatial

1. Before You Start — Prerequisites

Before installing the GSQIS Toolbox, please confirm the following requirements are met:

Requirement	Details
ArcGIS Pro	Version 3.0 or later
Operating System	Windows 10 or Windows 11 (64-bit)
User Permissions	Ability to add files and toolboxes within ArcGIS Pro
Disk Space	At least 5 MB free

■ *No internet connection or additional software is required to use the toolbox.*

How to Check Your ArcGIS Pro Version

- Open **ArcGIS Pro**.
- Click the **Project** tab in the top-left ribbon.
- Select **About ArcGIS Pro** at the bottom of the left panel.
- Your version number is shown at the top (e.g., *ArcGIS Pro 3.2.0*).

■ *If your version is below 3.0, contact your GIS administrator or Esri support to upgrade.*

2. What's in the Package

The distribution ZIP file contains the following files:

File	Description
GSQIS_Toolbox.pyt	The ArcGIS Pro toolbox file — required for installation
Installation_and_Testing_Guide.md	This guide in Markdown format
Installation_and_Testing_Guide.pdf	This guide in PDF format
FAQ_and_Troubleshooting.md	Frequently asked questions (Markdown)
FAQ_and_Troubleshooting.pdf	Frequently asked questions (PDF)

3. Installation

Step 1 — Unzip the Package

- Right-click **GSQIS-ArcGIS-Toolbox-v1.0.zip** in Windows File Explorer.

- Select **Extract All...**
- Choose a convenient folder (e.g., C:\GIS\Tools\GSQIS\) and click **Extract**.
- Make a note of the folder path — you will need it in Step 3.

■ *Tip: Avoid extracting to a network drive or a system folder. Your Documents folder or a dedicated GIS tools folder works best.*

Step 2 — Open ArcGIS Pro

Open ArcGIS Pro and either open an existing project or create a new one.

■ *Tip: From the splash screen, choose **Map** under New Project to create a blank project.*

Step 3 — Add the Toolbox to Your Project

- In the **Catalog** pane on the right side of the screen, locate the **Toolboxes** section. (If the Catalog pane is not visible: click **View** in the top ribbon → **Catalog Pane**.)
- Right-click **Toolboxes** and choose **Add Toolbox**.
- In the file browser, navigate to the folder where you extracted the ZIP file.
- Select **GSQIS_Toolbox.pyt** and click **OK**.
- The toolbox now appears under **Toolboxes** in the Catalog pane, labelled **GSQIS Toolbox**.

Step 4 — Confirm the Toolbox is Listed

After adding the toolbox, you should see the following in the Catalog pane:

Toolboxes ■■■ GSQIS Toolbox ■■■ Analysis ■■■ Layer Statistics

If **Layer Statistics** is visible under **Analysis**, installation is complete.

4. Running Your First Analysis

The **Layer Statistics** tool computes a summary of all data fields in any feature layer and saves the results to a text report. Follow these steps:

Step 1 — Load a Layer

- In the **Catalog** pane, browse to any shapefile or feature class.
- Right-click it and choose **Add To Current Map**.

Step 2 — Open the Layer Statistics Tool

- In the Catalog pane, expand **Toolboxes** → **GSQIS Toolbox** → **Analysis**.
- Double-click **Layer Statistics**.
- The tool dialog opens in the **Geoprocessing** pane.

Step 3 — Set Parameters and Run

Parameter	What to enter
Input Feature Layer	Select your loaded layer from the dropdown
Output Report File	Click the folder icon and choose where to save (e.g., C:\GIS\Output\stats.txt)
Maximum Unique Values to Report	Leave as 20 (default) unless you want to change the number of text values listed

Click **Run** (the blue button at the bottom of the Geoprocessing pane). When the tool finishes, you will see a message such as:

```
Report written to: C:\GIS\Output\stats.txt
```

Open the output **.txt** file in Notepad to review your layer statistics.

5. Verifying Successful Installation

Use the checklist below to confirm everything is working correctly:

- **GSQIS Toolbox** appears under Toolboxes in the Catalog pane.
- **Layer Statistics** tool opens when double-clicked.
- The tool runs without errors on a test layer.
- An output **.txt** report file is created at the path you specified.
- The report contains a **LAYER SUMMARY** section and a **FIELD STATISTICS** section.

6. Uninstalling the Toolbox

- In the **Catalog** pane, right-click **GSQIS Toolbox** under Toolboxes.
- Select **Remove**.

■ *Removing the toolbox only removes it from the current project. To fully remove it from your computer, delete the folder containing `GSQIS_Toolbox.pyt`. Output reports you have already generated are not affected.*

7. Getting Help

Channel	Details
Email support	geo-customersupport@idoxgroup.com
SDK & documentation	https://sdk.idoxgeospatial.co.uk/

When contacting support, please include:

- Your ArcGIS Pro version number
- A description of the issue or error message
- The name of the layer you were working with (if applicable)
